

Schematic as drawn up from a working copy of the "Advanced ROM Mk II Adaptor" by Advanced Computer Products, as 16K Sideways ROM/RAM adaptor for the Acorn Electron.

Not sure of the original EPROM type as there is some sort of adapter in between on mine, so schematic reflects the resulting 27C128 footprint. Indications for using RAM seems to imply 8K x 8 bit SRAM chips, HM6264P should work.
